Appln. No.: 09/973,083

Request For Reconsideration dated June 16, 2009

Reply to Office Action of March 16, 2009

Listing of Claims:

1-60 (Cancelled)

61. (Previously presented) A system, comprising:

a processor located remotely from a viewer's set top terminal at an operations center for

generating a plurality of group assignment rules based on viewing information;

a switching engine for receiving said plurality of group assignment rules, wherein said

plurality of group assignment rules associate a plurality of set top terminals to a group based on a

target category and a switching plan and for switching at least one program channel to at least

one feeder channel according to the switching plan, the feeder channel being an ancillary channel

for providing a plurality of advertisements based on a group assignment in the plurality of group

assignment rules;

a group assignment rules processor engine for managing the plurality of group

assignment rules by allowing a viewer to review which group the viewer's set top terminal is

assigned to by said processor according to a respective group assignment rule of said plurality of

group assignment rules and by processing any input from the viewer to locally modify or

override any of the remotely assigned group assignment rules associated with the viewer's set top

terminal: and

a data collection engine for collecting information including advertisements watched data

and any changes to the plurality of group assignment rules for use in future advertising targeting.

62. (Previously presented) The system of claim 61, further comprising: a memory for storing

the plurality of group assignment rules and the advertisements;

63. (Previously presented) The system of claim 61, wherein the data collection engine

includes an automatic data collection module and a manual data collection module.

Request For Reconsideration dated June 16, 2009

Reply to Office Action of March 16, 2009

64. (Previously presented) A method, comprising:

creating a plurality of group assignment rules based on viewing information via a processor located remotely from a viewer's set top terminal at an operations center;

receiving said plurality of group assignment rules, wherein said plurality of group assignment rules associate a plurality of set top terminals to a group based on a target category and a switching plan;

switching at least one program channel to at least one feeder channel according to the switching plan, the feeder channel being an ancillary channel for providing a plurality of advertisements based on a group assignment in the plurality of group assignment rules;

managing the group assignment rules by allowing a viewer to review which group the viewer's set top terminal is assigned to by said processor according to a respective group assignment rule of said plurality of group assignment rules and by processing any input from the viewer to locally modify or override any of the remotely assigned group assignment rules associated with the viewer's set top terminal; and

collecting information including advertisements watched data and any changes to the plurality of group assignment rules for use in future advertising targeting.

65. (Previously presented) The method of claim 63, further comprising: storing the plurality of group assignment rules and the advertisements.
